### Communicating with Families

All parents care about their children's health, and they often rely on you, their pediatrician, to help them navigate a confusing sea of child health information. Immunizations and vaccines are just one area of concern for families right now, and this Web site is here to help you help families make informed decisions.

### Resources for Vaccine Conversations

#### [Provider Resources for Vaccine Conversations with Parents](#)

Developed by the Centers for Disease Control and Prevention (CDC), the American Academy of Family Physicians (AAFP), and the American Academy of Pediatrics (AAP) these new materials can help health care providers communicate vaccine information to parents more effectively. These pieces build on the latest research in vaccine and communication science and are designed to help you stay current on vaccine topics; strengthen communication and trust between you and parents; and share up-to-date, easy-to-use information about vaccines and vaccine-preventable diseases with parents. Sign up for email updates at the link above, as additional materials will be added regularly. (Exit Site)

### Vaccine Information Statements

Before administering any vaccines covered by the National Vaccine Childhood Injury Act (NVCIA), federal law mandates that pediatricians give the parent/guardian [all appropriate copies of VISs](#) and make sure they understand the risks and benefits of the vaccine(s). By

American Academy of Pediatrics   
DEDICATED TO THE HEALTH OF ALL CHILDREN™

## The Childhood Immunization Schedule: Why Is It Like That?

**Q1: Who decides what immunizations children need ?**

**A:** Each year, top disease experts and doctors who care for children work together to decide what to recommend that will best protect U.S. children from diseases. The schedule is evaluated each year based on the most recent scientific data available. Changes are announced in January, if needed. The schedule is approved by the American Academy of Pediatrics, the Centers for Disease Control and Prevention, and the American Academy of Family Physicians.

**Q2: How are the timing and spacing of the shots determined?**

**A:** Each vaccine dose is scheduled using 2 factors. First, it is scheduled for the age when the body's immune system will work the best. Second, it is balanced with the need to provide protection to infants and children at the earliest possible age.

**Q3: Why are there so many doses?**

**A:** Researchers are always studying how well vaccines work. For many vaccines three or four doses are needed to fully protect your child. The doses need to be spaced out a certain amount to work the best.

**Q4: Why is the schedule "one size fits all?" Aren't there some children who shouldn't receive some vaccines?**

# SOUND ADVICE

on vaccines

from the American Academy of Pediatrics

Immunizations play a vital role in the health of the nation's children. To answer parents' questions about their children's vaccines, the American Academy of Pediatrics (AAP) offers a collection of interviews with pediatricians, researchers, advocates and other parents.

Click on the questions or descriptions below to hear responses to individual questions, or click on the link to listen to an entire interview.

# Protect Tomorrow™

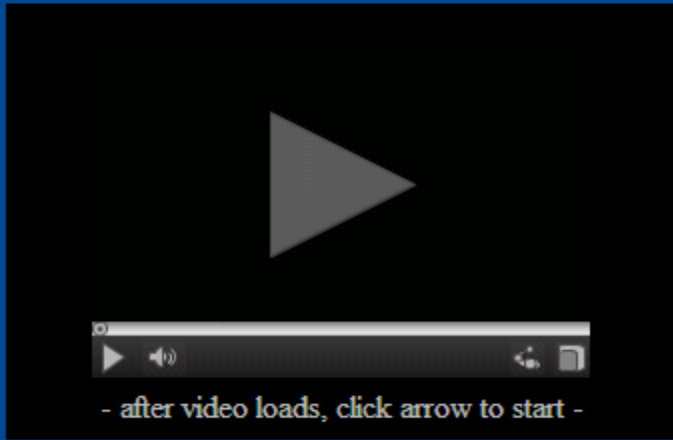

Protect Tomorrow is a national education awareness campaign that reminds parents about the importance of childhood immunizations. The campaign encourages parents to talk with their pediatricians about the benefits of vaccines, the importance of the recommended immunization schedule and how to best protect their children.

[Click here](#) to watch the PSAs.

This public service announcement is a message that can have a real impact on the lives of children. It tells the story of the devastation of the not-so-distant past so that history does not repeat itself.

The PSA features several people who have survived through the devastation of diseases that can now be prevented by vaccines.

## Behind the Scenes:

Cile watched her Aunt Sweetie die of diphtheria.

Jack survived a severe case of polio.

Ann suffered through measles
